DETAILED ACTION

Double Patenting

Claim 34 is provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claim 30 of this application. This is a provisional double patenting rejection since the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 30-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wakimoto et al., U.S. patent # 4,885,548.

Fig. 4 of Wakimoto et al. discloses a circuit comprising: transistors 5 and 6 can be read as a first and a second differential transistors; current source 9 can be read as a current source; capacitors 13 and 14 can be read as a first and a second miller capacitance cancellation capacitors; resistors 7 and 8 can be read as a first and a second output impedances.

Although Wakimoto et al. uses bipolar transistors instead of field effect transistors as claimed, they are just different types of transistors; therefore, it would have been obvious at the time the invention was made to a person having ordinary skill

in the art to substitute field effect transistors for bipolar transistors in the circuit of Wakimoto et al. in the absence of unexpected results since such substitution is well known in the art.

Regarding claims 32 and 33, although Wakimoto et al. only shows a current source instead of a transistor or a NMOS, PMOS transistor, Momtaz et al. teaches in Fig. 2 the use of a CMOS transistor for the current source; thus, it would have been obvious at the time the invention was made to a person having ordinary skill in the art to use the teaching of Momtaz et al. in the circuit of Wakimoto et al. since this is a well known practice in the art.

Allowable Subject Matter

Claims 35-58 are allowed.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. # 6,194,972 B1, # 5,793,551, and # 6,774,722 B2 contain some limitations of the claimed invention.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not

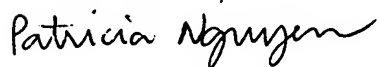

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
